This is detected via at least one sensor (6) coupled to a monitoring device (10) controlling the door locking system, for preventing opening of an automobile door for a timed interval when a potentially dangerous situation is detected.**Use** - The adaptive door locking system prevents opening of an automobile door in a potentially dangerous situation, e.g. when a motorcycle is overtaking the vehicle.**Advantage** - The door locking system ensures safe opening of the automobile doors.**Images:****Description of Drawing(s)** - The figure shows a function block diagram of an adaptive door locking system for an automobile.
